**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Notta et al (#5,322,346).

Notta et al show a recliner mechanism comprising a frame incorporated into a seat bottom and a seatback arm pivotally secured to the frame, the seatback arm has a lower arcuate surface defining a first plurality of serrations, a pawl hingedly secured to the frame and incorporating a second plurality of serrations. The pawl has an interior aperture defined by an inner wall configuration. A cam is rotatably secured to the frame. A lever is pivotally secured to the cam and extends from the frame.

With claim 2, the second plurality of serrations extends along an upper arcuate surface of the pawl.

With claim 3, the inner wall configuration of the pawl comprises a first plurality of projections.

With claim 4, each of the pawl and cam had a first, second, and third co-acting projections.

With claim 5, the frame has an inner plate and a spaced apart outer plate.

Art Unit: 3636

With claim 6, a main pivot pin extends through aligning apertures in the spaced-apart inner and outer plates.

With claim 7, a cam pivot pin extend through a central aperture.

With claim 8, a secondary coil spring is secured to an exterior face of the outer plate.

With claim 9, a pawl rivet seat is provided through an aperture in the pawl.

With claim 10, a pair of spacer bushings engages additional and aligning pair of apertures.

With claim 11, an extending end of the main coil spring engages a projecting end of a rivet.

With claim 12, an extending end of the secondary coil spring engages an angle projection with the outer plate.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoshida et al, Moyer et al, Barley, Mori et al, and Yoshida are cited as showing similar types of recliner mechanism.
